NFR [🔗](#)

Performance Testing Results:

-Requested performance test of Id Card list and details API on 6/17/2025. Update TBD

Rate Limit Updates:

Consumer	API	current volume	OE volume	Expected	Existing Rate Limit	New Rate Limit
AH AWS App Token	ID Card Detail	15/min	150/min		21,060/min	
	API Product:					
	awsaetnahealth-correspondence-healthcare-1a-i					
	API Name:					

	atv3aetnahealthidentificationcards-apigw					
	ID Card List API Product: awsaetnahealth-correspondence-healthcare-1-i API Name: atv3aetnahealthmembersidentificationcards-apigw	17/min	170/min		1750/min	5000/min
AH iOS	ID Card Detail					
	ID Card List					
CVS	ID Card Detail			7200/min		7200/min
	ID Card List			4800/min		4800/min

Services [🔗](#)

- plan-groups
- multimembershipfeatures
- cvs-bff (needs to be built)
- id-cards-service

Service Logic [🔗](#)

- Service will call plangroups API
 - Service will call launch darkly to check on PSUIDs to ensure member is eligible to see Super App ID Cards Feature
 - Find portalGroups with LOB of either commercial or medicare (TODO: do we need to support pharmacy aka specialties?)
 - Filter plans who have digital access revoked (plan sponsor wave number 955 or 988)
 - within these plans - find policies with primary policy type as either Dental or Medical
 - Check memberships that have a status of `Active` or `Dependant Active Coverage` (TODO: any other statuses?)
 - The remaining portal groups are valid, so we loop through each portal group, returning all appropriate unique memberIds
- Service will call multimembership Features with unique memberIds
 - Return back unique memberIds that have idcard feature toggle enabled
- Call identification card list API with all unique memberIds in parallel
 - Grab all `identificationCardResourceId`
- Call idcard details in parallel for all `identificationCardResourceId`'s

How to split ID Card Image on iOS → <https://github.com/cvs-health-source-code/aetnahealth-ios/blob/3334f8099aaca1146feac923b3b94c4ca0436d0d/Packages/AppDependencies/Sources/AppDependencies/Features/IDCard/IDCardViewModel.swift#L313>

Client Changes [↗](#)

Client side logic [↗](#)

Summary of how client should integrate.

Field mapping [↗](#)

Response Key	Mapping
cards[].cardType	<code>readIdentificationcardResponse.identificationCard.idCardType</code>
cards[].cardImageFront	<code>readIdentificationcardResponse.identificationCard.idCardImages.imageFront</code>
cards[].cardImageBack	<code>readIdentificationcardResponse.identificationCard.idCardImages.imageBack</code>
cards[].cardImageCombined	<code>readIdentificationcardResponse.identificationCard.idCardImages.imageCombined</code>
cards[].cardImageType	<code>readIdentificationcardResponse.identificationCard.idCardImageContentType</code>
cards[].memberName	<code>readIdentificationcardResponse.identificationCard.memberships[].person.nameFull</code>
cards[].memberId	<code>readIdentificationcardResponse.identificationCard.memberships[].memberId</code>
cards[].subscriberName (do we need?)	
cards[].planType	<code>readIdentificationcardResponse.policies[].policyType</code>
cards[].payerId	<code>readIdentificationcardResponse.identificationCard.idCardReadout[].dataElementValue</code> where <code>dataElementName == "Payor Id"</code>
cards[].payerName	Aetna
cards[].groupName	<code>readIdentificationcardResponse.identificationCard.idCardReadout[].dataElementValue</code> where <code>dataElementName == "Plansponsor Name"</code>
cards[].groupId	<code>readIdentificationcardResponse.identificationCard.idCardReadout[].dataElementValue</code> where <code>dataElementName == "Group Number"</code>
cards[].relationshipToSubscriber	<code>readIdentificationcardResponse.identificationCard.memberships[].relationshipToSubscriber</code>

```
cards[].idCardResourceId
```

```
readIdentificationcardResponse.identificati  
onCard.idCardResourceId
```

- MMF Toggle `CVSSuperApp`

Testing [↗](#)

TODO: Find Edge Cases

- example multiple active medical plans?

Security Review [↗](#)

Provide any notes, changes done as part of security review. Security reviews should be done especially when something non-standard is happening. Third party integration, some new technology/component, SDK recommendation, SFTP, PII/PHI storage, etc ... please do a security review with members of security team and provide date, findings, changes here.
